Titles:	MM5D growing house controlling and remote monitoring unit		Rev.:	191101	Pages:	2/36
	Technical manual					
Name:	Pozsár Zsolt				Date:	2020. 03. 31.

I. Hardware

Titles:	MM5D growing house controlling and remote monitoring unit	Rev.:	191101	Pages:	3/36
	Technical manual				
Name:	Pozsár Zsolt			Date:	2020. 03. 31.

The device - cooperates with MM4A distribution and switching unit - is capable of measuring, controlling and monitoring the characteristics of a growing site.

1. Technical data

Supply voltage: 5V DC (with 230 V AC/5 V DC power supply)

Supply current: max. 2.5 A

Isolation class: Class I

Mechanical size: 240 x 190 x 90 mm

IP protection: IP 54

Mass of cover: termoplast (ABS)

Communication: Ethernet (RJ45),
Wireless LAN,
TTL 3.3V serial port

Administration: SSH,
serial console

Input:

sign	function	note
IN 1	MM4A manual operation mode	manual mode: level L
IN 2	MM4A overcurrent error	error: level L
IN 3	check water pressure	good: level L
IN 4	check state of doors	closed: level L

Outputs:

sign	function	note
OUT 1	heater control output to MM4A	
OUT 2	lighting control output to MM4A	
OUT 3	ventilator control output to MM4A	
OUT 4	humidifier control output	

Error sign lamps:

sign	function	note
ERR 1	temperature is out of good range	
ERR 2	MM4A overcurrent error	
ERR 3	water pressure is too low	
ERR 4	humidity is out of good range	

Titles:	MM5D growing house controlling and remote monitoring unit	Rev.:	191101	Pages:	4/36
	Technical manual				
Name:	Pozsár Zsolt	Date:	2020. 03. 31.		

Status outputs:

sign	function	note
OUT 5	signal tower light - green	normal operation
OUT 6	signal tower light - yellow	normal operation with warning
OUT 7	signal tower light - red	error
OUT 8	not used/spare	

Measured characteristics:

name	range	resolution	accuracy	note
temperature	-40...+80 °C	0,1 °C	< ±0,5 °C	
humidity	0-100% RH	0,1 % RH	±2 % RH	

2. General description

The device is based on a Raspberry Pi 3 B + microcomputer with Raspbian operating system and includes software needed to operate the unit. Your computer does not have a graphics system installed.

You do not need to connect a keyboard and monitor to set up and operate the device., you can see input and output status, error indications, measured values and system messages (see 3.) on the LEDs and the matrix LED display. You can access to set up device via local area network with SSH or serial console. The measured data can be checked with a web browser.

The inputs are TTL level inputs with pull-up resistance and the active state is level "L". The inputs are protected against overvoltage and reverse polarity input voltage.

DHT 11, DHT 22 or AM2302 T / RH sensors can be connected to the unit.

The device has eight switching relay contact outputs with a load capacity of up to 250 V AC or up to 30 V DC 10 A, but an external relay or contactor is recommended to protect the printed circuit. Consumer circuits must always be provided with overcurrent protection. The relays can be disabled with the key switch on the right.

3. System messages on display

In addition to the measured values, the system may display system messages consisting of the following combination of letters and numbers:

Titles:	MM5D growing house controlling and remote monitoring unit	Rev.:	191101	Pages:	5/36
	Technical manual				
Name:	Pozsár Zsolt			Date:	2020. 03. 31.

a) Debug codes

You can see these on display if verbose debug logging enabled.

- D #00 Configuration is loaded.
- D #01 Environment characteristics is loaded.
- D #02 Starting program as daemon.
- D #03 Initializing GPIO ports.
- D #04 Checking override file.
- D #05 Get external temperature from internet.
- D #06 Measuring T/RH.
- D #07 Measure is done.
- D #08 Reading input ports.
- D #09 Check values and set outputs.
- D #10 Writing output ports.
- D #11 Auto off enabled at 4th output port.
- D #12 Creating lockfile.
- D #13 Writing data to log.
- D #14 Removing lockfile.
- D #15 Waiting 10 s.

b) Warning codes

- W #01 Cannot get external temperature from internet.
- W #02 Measured values are bad!
- W #51 MM4A in manual operation mode.
- W #52 Doors/windows are opened.

c) Error codes

- E #01 Cannot open main configuration file.
- E #02 Cannot open environment characteristic configuration file.
- E #03 Cannot create/remove lockfile.
- E #04 Cannot write logfile.
- E #51 Temperature in growing house is out of range.
- E #52 MM4A overcurrent protection error.
- E #53 Water pressure is too low.
- E #54 Relative humidity in growing house is out of range.

Titles:	MM5D growing house controlling and remote monitoring unit	Rev.:	191101	Pages:	6/36
	Technical manual				
Name:	Pozsár Zsolt			Date:	2020. 03. 31.

4. Signal tower light states

green	normal operation
green+yellow	MM4A is in manual operation mode
	one of the doors is open
red	MM4A overcurrent error
	water pressure is too low

5. Schematic and PCB draws

The wiring diagrams of the device is shown in Annex 1-3, PCB draws are in Annex 5-10. You can download it as part of the complete documentation or in separate PDF, SVG and KiCAD formats from the developer/manufacturer's website. The Gerber files needed for production are included in the package.

6. Other draws and documents

Documentation package contents Drilling draws in PDF and DXF format and draw and frontpage in EMF, EPS, PDF, ODG and SVG format and wiring lists in TXT format.

7. Terms of use

Hardware documentation can be modified and/or redistributed under the Creative Commons 4.0 Attribution Non-Commercial (CC-BY-NC-4.0) License. You can read the full (English) text of the license online. (Refer to Chapter III for references.)

8. Look of unit

a) Manuals and connectors

1. under supply voltage (green LED)
2. ACT signal light (green LED)
3. matrix display
4. operation mode switch
5. IN 1-4 active input signal light (green LED)
6. OUT 1-4 active output signal light (yellow LED)
7. ERR 1-4 signal light (red LED)
8. console connector (J2)
9. fuse of supply voltage (2,5 A F)
10. disable output relays key switch

Titles:	MM5D growing house controlling and remote monitoring unit	Rev.:	191101	Pages:	11/36
	Technical manual				
Name:	Pozsár Zsolt			Date:	2020. 03. 31.

II. Software

Titles:	MM5D growing house controlling and remote monitoring unit	Rev.:	191101	Pages:	12/36
	Technical manual				
Name:	Pozsár Zsolt			Date:	2020. 03. 31.

1. General description

The software consists of five main parts:

Operating daemon

Measurement, timing and electrical equipment control is done by a Python-language program that runs as a service in the background. Its utilities are Bash shell programs, the configuration files are in text (INI) format. The setup program has a full screen character interface, its source code (FreePascal) is included in the tar.gz package only. This part of the software is included in the tar.gz package and the *mm5d-sw_0.1-1_armhf.deb* package.

Matrix display handler daemon

The LED matrix display is handled by a Python-language program that runs as a service in the background. It communicates with the previous service through a named pipe file. This part of the software is included in the tar.gz package and the *mm5d-sw_0.1-1_armhf.deb* package.

Environmental characteristics adjustment program

The setup program has a full screen character interface, its source code (FreePascal) is included in the tar.gz package only. This part of the software is included in the tar.gz package and the *mm5d-eec_0.1-1_armhf.deb* package.

Web interface

Data access is provided by CGI programs written in Perl, its Bash shell utility, and web content consists of static HTML files. Currently available in English, Czech, French, Croatian, Polish, Hungarian, German, Russian, Romanian, Serbian, Slovak, Slovenian and Ukrainian. This requires an Apache2 web server. This part of the software is included in the tar.gz package and the *mm5d-web_0.1-1_all.deb* package.

Hardware checker program

This Python program can be used to verify that the hardware is working properly. During the test, general information and messages are displayed on the screen, test information is displayed on the matrix display. Before testing, both running services of the software must be stopped. This part of the software is included in the tar.gz package and the *mm5d-sw_0.1-1_armhf.deb* package.

Titles:	MM5D growing house controlling and remote monitoring unit	Rev.:	191101	Pages:	13/36
	Technical manual				
Name:	Pozsár Zsolt			Date:	2020. 03. 31.

2. Prepare installation

Before installing the program, you need to install Raspbian OS Lite on your Raspberry Pi. Remember to change the default password for pi, set the device name (hostname) and access to the local network. For easy remote access, use a permanent IP address or set up an IP address assignment on your router.

Prepare operation system:

```
pi@raspberrypi$ sudo apt-get update
pi@raspberrypi$ sudo apt-get upgrade
pi@raspberrypi$ sudo apt-get install git wget
pi@raspberrypi$ sudo echo "deb http://www.szerafingomba.hu/deb/ ." >> /etc/apt/sources.list
pi@raspberrypi$ sudo wget -q -O - http://www.szerafingomba.hu/deb/KEY.gpg | apt-key add -
pi@raspberrypi$ sudo apt-get update
pi@raspberrypi$ mkdir $HOME/download
```

3. Download

Download program from homepage:

```
pi@raspberrypi$ cd $HOME/download
pi@raspberrypi$ wget http://www.szerafingomba.hu/software/mm5d/mm5d-sw-0.1-armhf.tar.gz
pi@raspberrypi$ tar -xzf mm5d-sw-0.1-armhf.tar.gz
```

Download latest version of program from Github:

```
pi@raspberrypi$ cd $HOME/download
pi@raspberrypi$ git clone http://github.com/pozsarzs/mm5d-sw.git
```

4. Installation

```
pi@raspberrypi$ cd mm5d-sw
pi@raspberrypi$ ./prepare
pi@raspberrypi$ ./install
```

Download and install with package manager:

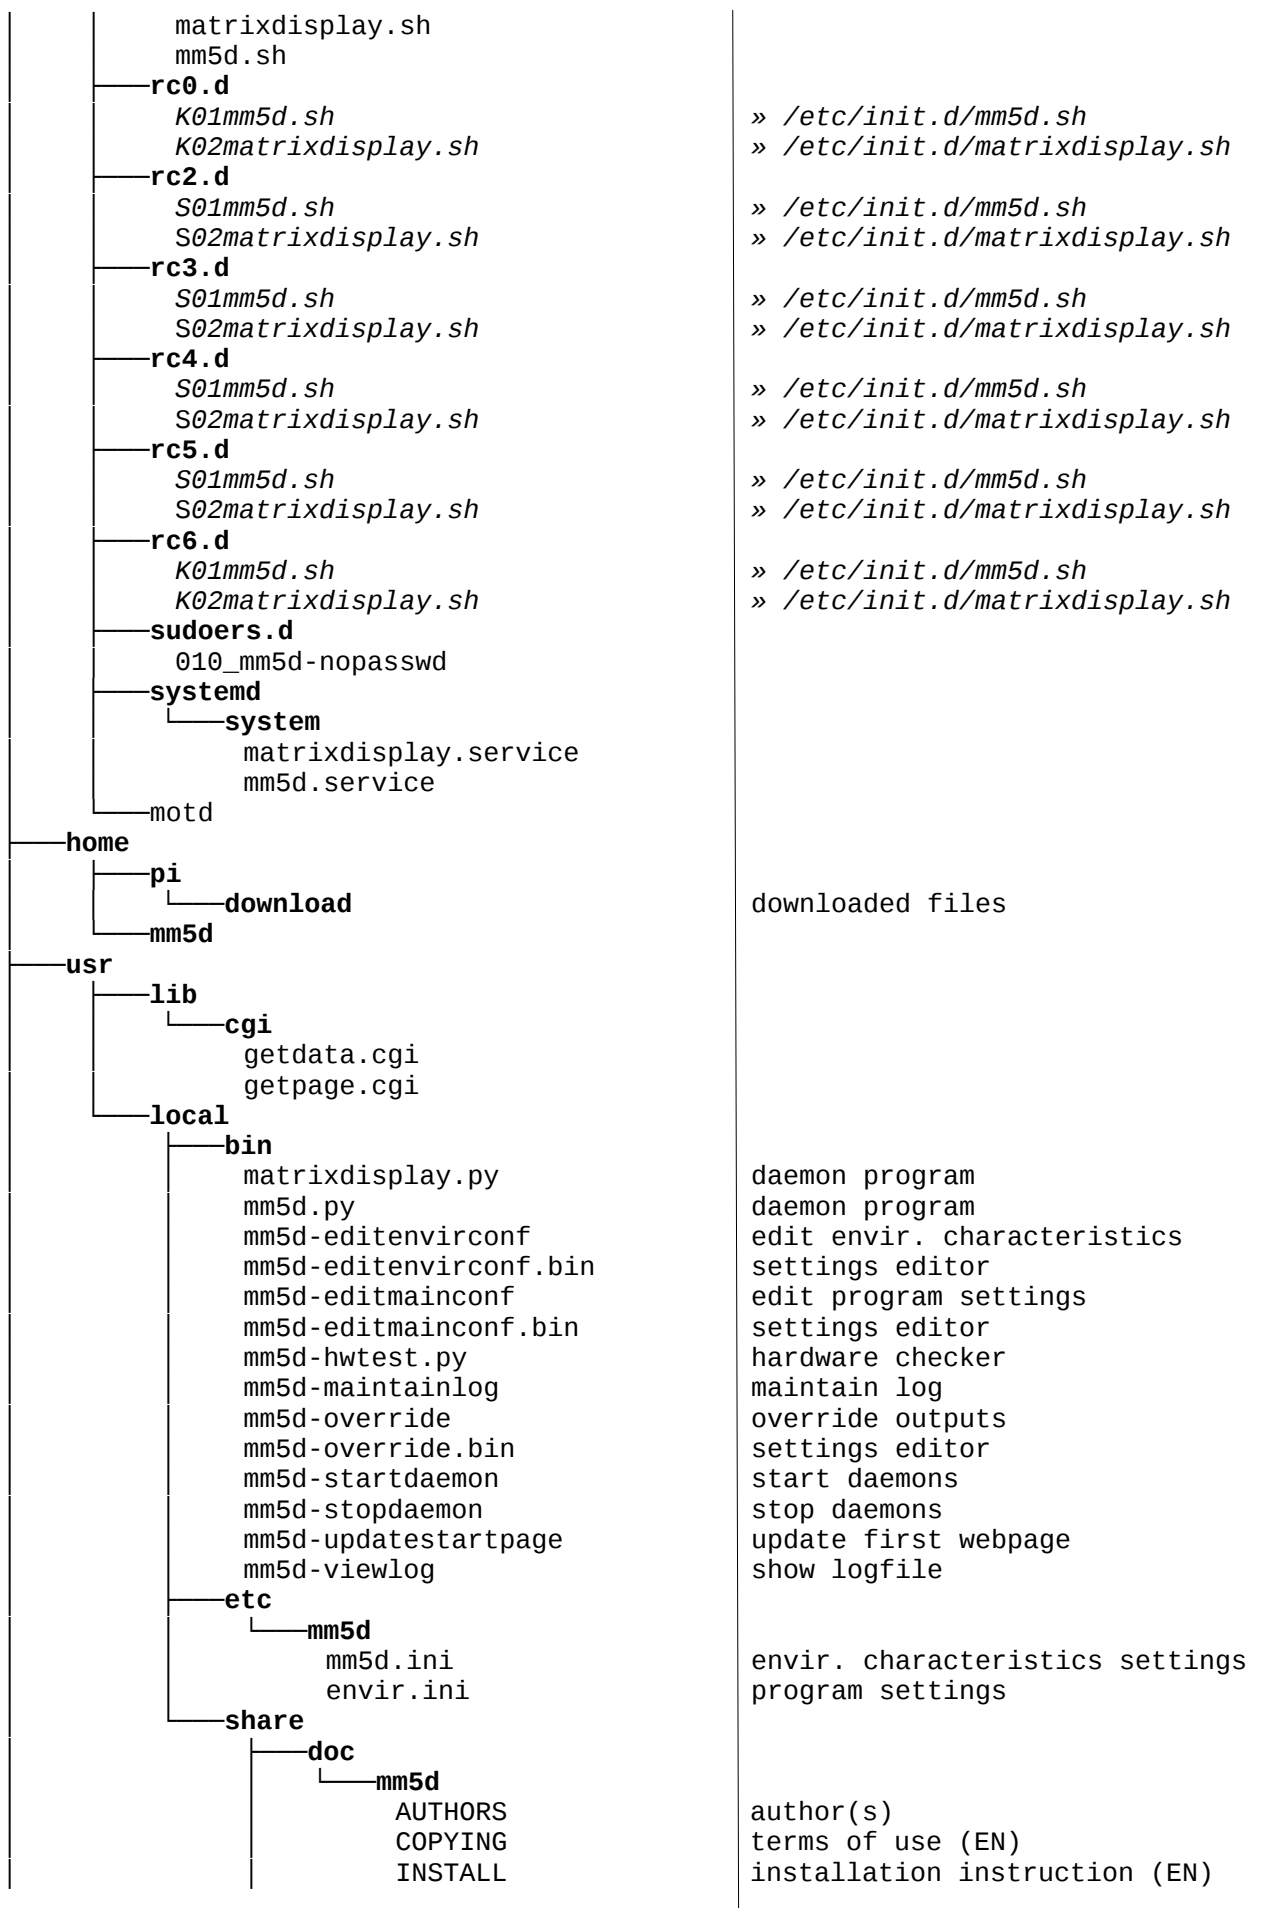

```
pi@raspberrypi$ sudo apt-get install mm5d-sw mm5d-web mm5d-eec
```

5. Files of program

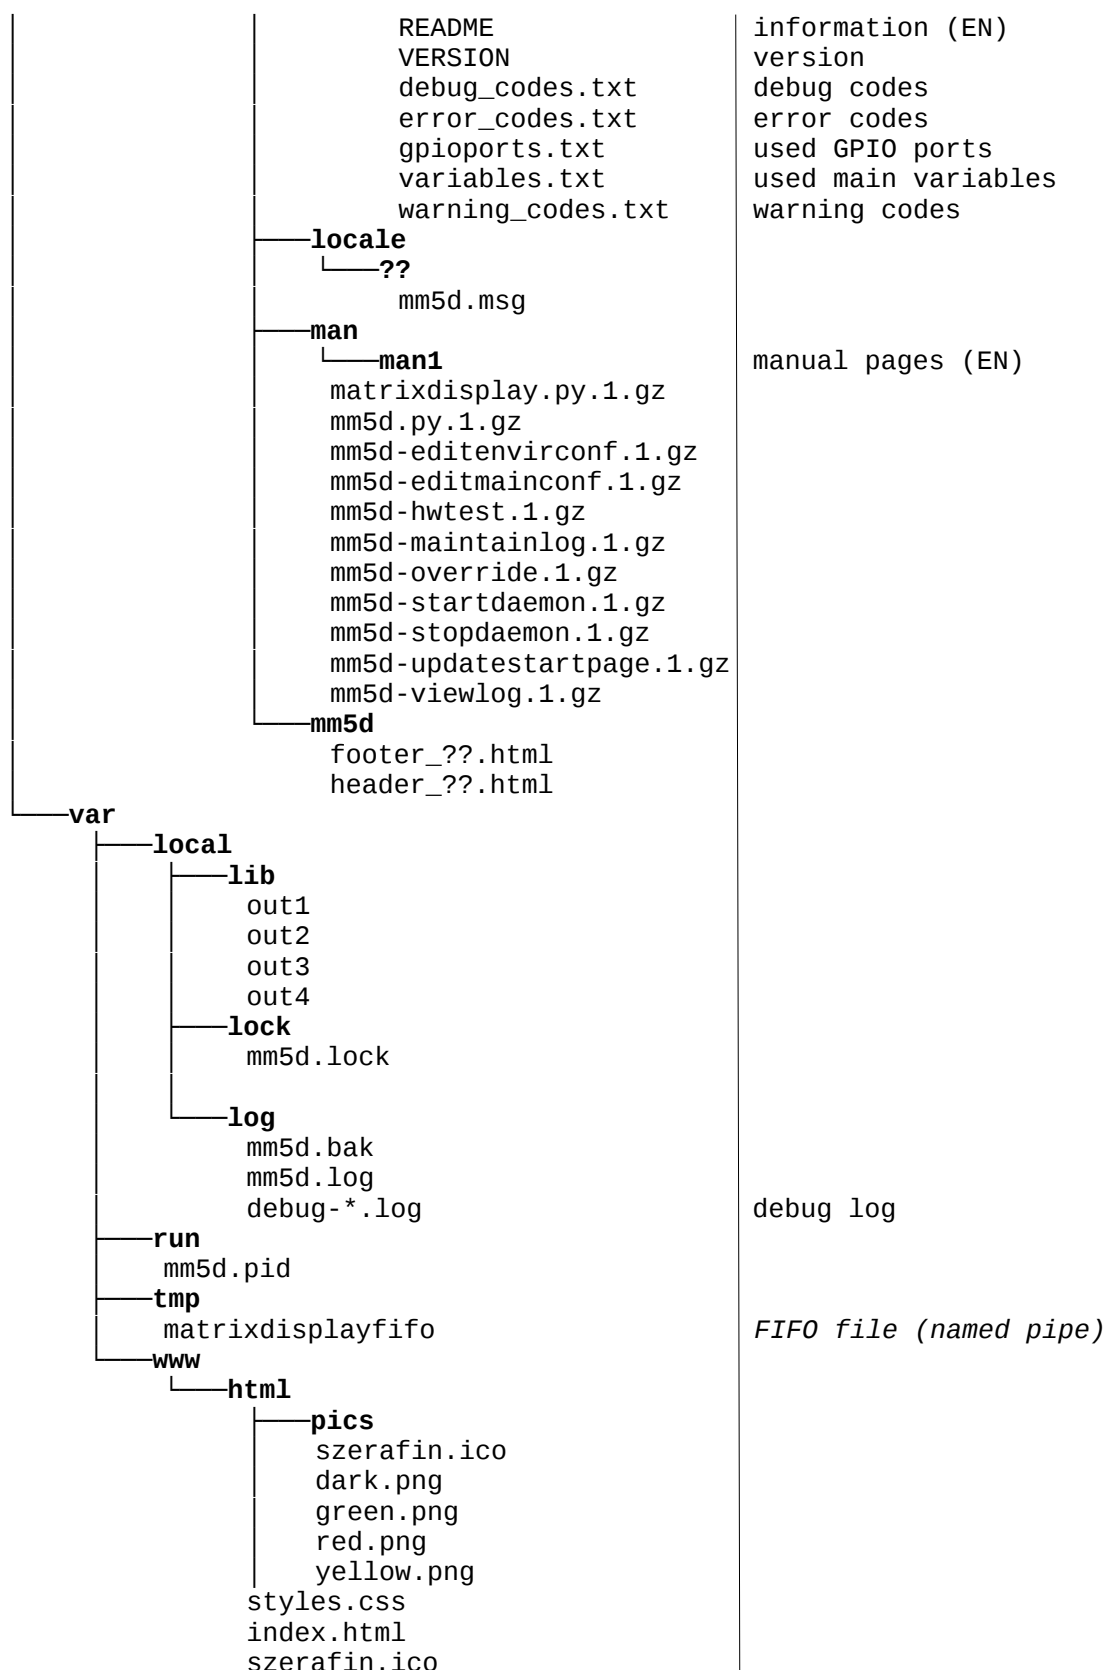

The program's installed and runtime created files, with explanations of important files for the user and the purpose of symbolic links:

Titles:	MM5D growing house controlling and remote monitoring unit	Rev.:	191101	Pages:	14/36
	Technical manual				
Name:	Pozsár Zsolt			Date:	2020. 03. 31.

Titles:	MM5D growing house controlling and remote monitoring unit	Rev.:	191101	Pages:	15/36
	Technical manual				
Name:	Pozsár Zsolt			Date:	2020. 03. 31.

When installing with package manager, the program is installed to /usr instead of /usr/local.

6. Setup

Both configuration shell programs will stop the running services of MM5D, then open the editor

Titles:	MM5D growing house controlling and remote monitoring unit	Rev.:	191101	Pages:	16/36
	Technical manual				
Name:	Pozsár Zsolt			Date:	2020. 03. 31.

and then start them after closing.

To set the program:

```
mm5d@raspberrypi$ mm5d-editmainconf
```

```
Bash

Figure 4: mm5d-editenvirconf

Titles:	MM5D growing house controlling and remote monitoring unit	Rev.:	191101	Pages:	17/36
	Technical manual				
Name:	Pozsár Zsolt			Date:	2020. 03. 31.

7. Using the device

The device operates automatically after installation and setup and does not require any human intervention. The status of the growing site can be checked with a web browser, and settings can be made by logging in via a serial port or LAN.

a) Connect with web browser

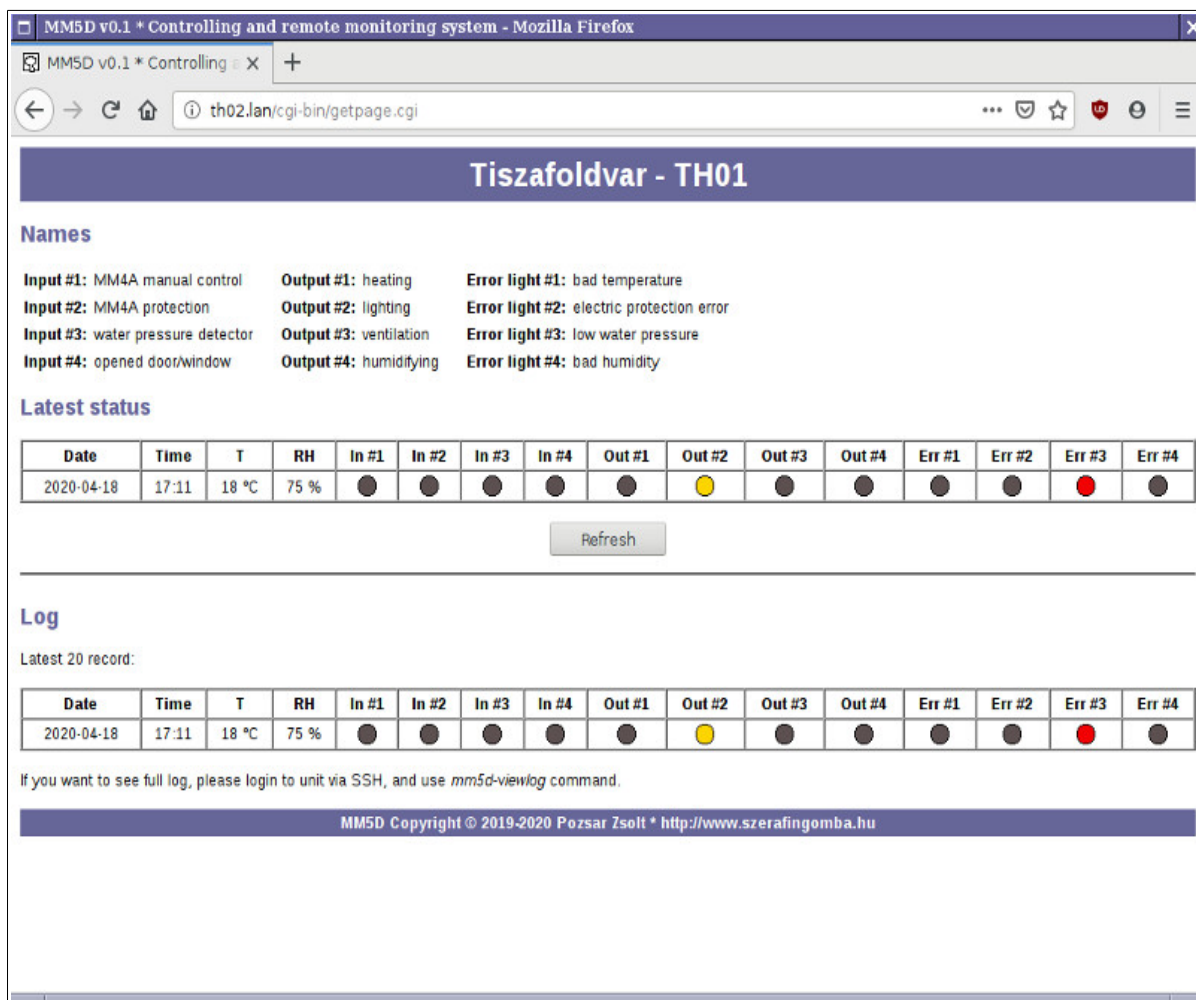

Figure 5: Web interface

Titles:	MM5D growing house controlling and remote monitoring unit	Rev.:	191101	Pages:	18/36
	Technical manual				
Name:	Pozsár Zsolt			Date:	2020. 03. 31.

b) Login via serial port

Cable

The console connector of the device and the RS-232 serial port of the computer must be connected by means of a level shifter adapter with a null modem cable. The level shifter adapter is required due to the different voltages of the logic levels (0 V / 3.3 V and -12 V / + 12 V).

The console connector of the device and the USB port of the computer must be connected using an Adafruit 954, FTDI TTL-232R-RPI or similar 3.3V serial / USB cable.

Connection parameters

speed (baudrate): 115 200 bps
data bits: 8
parity bit: no
stop bit: 1
flow control: no

Connect via linux terminal

Name of ports (device files):

RS-232 serial port: /dev/ttyS0, /dev/ttyS1, ...
serial/USB converter: /dev/ttyUSB0, /dev/ttyUSB1, ...

Make sure you are a member of the dialout group:

```
username@localhost$ id
```

If not, set up your group membership:

```
username@localhost$ sudo usermod -a -G dialout username
```

Connect with GNU Screen program:

```
username@localhost$ screen port_name 115200
```

Connect with Minicom program:

```
username@localhost$ minicom -b 115200 -o -D port_name
```

Connect with Windows terminal (Putty)

Name of ports:

RS-232 serial port: COM1, COM2, ...
serial port/USB converter: variable, see the device manager

Select the serial connection mode and communication port, set the speed and start the connection.

Titles:	MM5D growing house controlling and remote monitoring unit	Rev.:	191101	Pages:	19/36
	Technical manual				
Name:	Pozsár Zsolt	Date:	2020. 03. 31.		

c) Login via network

Connect on linux

Connect with OpenSSH client:

```
username@localhost$ ssh ip_address
```

Connect on Windows

For non-Unix-like operating systems, the terminal type must be set to Linux for proper character representation, usually by setting the TERM environment variable. If you are using a Putty application, enter it in the Terminal-type string field on the Connection/Data page.

Connect with OpenSSH client:

```
C:\Users\username>set TERM=linux  
C:\Users\username>ssh ip_address
```

If you are using Putty, select the SSH connection mode, enter the IP address and start the connection.

```
Bash  
pozsarzs@karak:~$ ssh mm5d@th02.lan  
mm5d@th02.lan's password:  
  
Linux th02 4.19.75-v7+ #1270 SMP Tue Sep 24 18:45:11 BST 2019 armv7l

9. Downloadable software package

The package can be downloaded from the manufacturer's website in a .tar.gz compressed file. (Refer to Chapter III for references.) Name of current package: *mm5d-sw-0.1-armhf.tar.gz*

Content of this package (only directories and important files for users):

mm5d - sw	
— binary	binary files
— documents	documentation (EN)
AUTHORS	author(s)
INSTALL	installation instruction
README	information
VERSION	version number
— manuals	manual pages (EN)
— messages	translated webpage text
— packaging	files for make deb packages
— programs	main programs (Python)
— scripts	utility programs (Bash)
— settings	configuration files
— source	source code
— webpage	static components of webpage
— install	installer script
— preinstall	preinstaller script
— uninstall	uninstaller script
— LICENCE	terms of use (EN)
— README	short description (EN)
